Aht’Wy Plaza Interchange

May 2019 update

Before

After

About the pictures above:

Earlier this month, ITD operations crews shifted the westbound right turn lane into the east entrance of the plaza to improve line of sight for turning drivers as they exit.

The modification will prevent drivers turning into the plaza from shielding other vehicles in the through lanes.

This was identified as a factor in recent fatal crashes and recommended by the joint road safety audit as a possible solution to be implemented before the planned interchange.

The project team meets regularly and includes NPT, J-U-B Engineering and ITD. At the latest meeting, the team discussed fencing and pedestrian facilities. They also reviewed preliminary staging for construction.
